

KAP Survey Results

Jidely site

3 men and 4 women participated in the survey, making 7 respondents in total. The average age ranges from 26-35 years old. Only one respondent indicated their level of education (completed higher education institution). They mainly work in the farming sector (livestock – 7; crops – 3), as civil servants (6).

The most observed environmental conditions observed in the last 5-10 years:

- Decrease in precipitation (6)
- Increase in precipitation (heavy rain, snow, hail, etc.) (5)
- Increase in extreme weather events (e.g., floods, droughts) (5)
- Increase in average temperature (3)

4 respondents indicated that they are familiar with the term climate change, and 3 specified that it is an important issue to them.

The most noted consequences of weather and environmental changes:

- Reduced crop yields (7)
- Increase in human diseases (7)
- Appearance of pests/parasites (6)
- Reduced numbers of plant or animal populations (4)
- Degradation of soil (4)

The most noted changes with wildlife as a result of changes in weather and environment are:

- More wild animals appear near villages (3)
- Wild animals attack livestock/eat crops (3)
- Loss of natural food sources (3)
- Competition with wildlife for resources (e.g., water, grazing land) (2)
- Clean water sources have diminished/disappeared (1)
- Loss of natural habitats (e.g., forest, grassland) (1)

3 people indicated that they take measures to reduce wildlife conflicts in their area, and 2 are interested in learning about the measures they can take to help wildlife conservation, while 2 are not sure.

Most common information technologies are TV (7), radio (6), cell phone with Internet (6), computer with Internet (2).

Preferred media and information sources are newspapers (7), TV (7), radio (7), community meetings and events (6), Internet (4).

The most trusted sources of information:

- Government agencies (7)
- Broadcast media (7)
- Print media (newspapers and magazines) (6)
- Scientists (2)

Karoy site

2 men and 2 women participated in the survey, making 4 respondents in total. The average age is 51 and older. They mainly work in the farming sector (livestock – 4), as civil servants (3) and retired (1).

The most observed environmental conditions observed in the last 5-10 years:

- Increase in extreme weather events (e.g., floods, droughts) (3)
- Increase in average temperature (2)
- Increase in precipitation (heavy rain, snow, hail, etc.) (2)
- Decrease in precipitation (2)
- Decrease in average temperature (1)
- Decrease in extreme weather events (e.g., floods, droughts) (1)
- Increased/decreased water resources (1)

2 respondents indicated that they are familiar with the term climate change and that it is an important issue to them.

The most noted consequences of weather and environmental changes are:

- Increase in human diseases (4)
- Reduced crop yields (3)
- Tree/grass desiccation (3)
- Change in water availability (3)
- Appearance of pests/parasites (2)
- Increase in livestock diseases (2)
- Degradation of soil (2)

The most noted changes of wildlife as a result of changes in weather and environment are:

- More wild animals appear near villages (2)
- Wild animals attack livestock/eat crops (2)
- Clean water sources have diminished/disappeared (2)
- Loss of natural food sources (2)
- Loss of natural habitats (e.g., forest, grassland) (1)
- Competition with wildlife for resources (e.g., water, grazing land) (1)

2 people indicated that they take measures to reduce wildlife conflicts in their area, and 1 is interested in learning about the measures they can take to help wildlife conservation.

Most common information technologies are TV (4), Radio (3), cell phone with Internet (3), computer with internet (2).

Preferred media and information sources are TV (4), books and publications (4), conversations with relatives, friends, neighbours (3), community meetings and events (3), newspapers (2)

The most trusted sources of information:

- Government agencies (4)
- Broadcast media (radio and TV) (4)
- Scientists (1)

Koktal site

2 men and 2 women participated in the survey, making 4 respondents in total. The average age ranges from 26-35 years old. 2 respondents indicated their level of education (completed higher education institution). They mainly work in the farming sector (livestock – 4), as civil servants (2) or do small business (2).

The most observed changes environmental conditions in the last 5-10 years:

- Increase in average temperature (3)
- Decrease in precipitation (2)
- Increased/decreased water resources (2)
- Increase in precipitation (heavy rain, snow, hail, etc.) (1)
- Increase in extreme weather events (e.g., floods, droughts) (1)

3 respondents are familiar with the term climate change, and 2 indicated that it is an important issue to them.

The most noted consequences of weather and environmental change are:

- Reduced crop yields (4)
- Tree/grass desiccation (4)
- Change in water availability (4)
- Decrease in livestock productivity (3)
- Increase in human diseases (3)
- Appearance of pests/parasites (2)
- Degradation of soil (2)

The most noted changes with wildlife as a result of changes in weather and environmental are:

- Clean water sources have diminished/disappeared (3)
- More wild animals appear near villages (2)
- Wild animals attack livestock/eat crops (2)
- Loss of natural habitats (e.g., forest, grassland) (2)
- Loss of natural food sources (2)
- Increased human activity in wildlife habitats (1)
- Competition with wildlife for resources (e.g., water, grazing land) (1)

1 person indicated that they take measures to reduce wildlife conflicts in their area, and 1 is interested in learning about the measures they can take to help wildlife conservation.

Most common information technologies are TV (3), cell phone with internet (3), radio (2) and computer with internet (2).

Preferred media and information sources are TV (4), books and publications (4), community meetings and events, newspapers (3), radio (2), internet (2).

The most trusted sources of information are:

- Scientists (4)
- Government agencies (4)
- Broadcast media (radio and TV) (1)

Meteostation

1 person took part in the survey. A man, 51 and older, have completed higher education working as a civil servant.

The most observed changes environmental conditions in the last 5-10 years:

- Increase in average temperature
- Decrease in average temperature
- Decrease in precipitation

The respondent is familiar with the term climate change, and indicated that it is an important issue to them.

The most noted consequences of weather and environmental change are:

- Reduced crop yields
- Appearance of pests/parasites
- Increase in human diseases
- Tree/grass desiccation

A respondent indicated that they take measures to reduce wildlife conflicts in their area.

Most common information technologies TV, cell phone with Internet, computer with Internet.

Preferred media and information sources are TV, radio, books and publications, Internet, community meetings and events.

The most trusted sources of information are:

- Scientists
- Government agencies
- Broadcast media (radio and TV)
